

Schlumberger Water Services Launches Diver-VisiONE

New Groundwater Monitoring Software Designed to Meet Mandatory Reporting Requirements

WATERLOO, Canada, April 29 2008 - Schlumberger Water Services (SWS) today announced the release of Diver-VisiONE* comprehensive groundwater monitoring software. An intuitive desktop application, Diver-VisiONE is designed for public water agencies, environmental consultants, and industries to effectively manage their groundwater monitoring and reporting requirements.

An important component of Diver-NETZ* monitoring networks, Diver-VisiONE provides users with a full range of graphical tools for monitoring well location details, displaying borehole lithology, well construction, time-varying data (groundwater water elevation, temperature, conductivity), and mapping capabilities in a seamlessly integrated groundwater software package.

Diver-VisiONE capabilities include:

- **Monitoring Well Data Management** - Create, modify, and display X, Y, Z location data, borehole lithology, well construction design, and time-series.
- **Mapping** - View and label your monitoring well data over a map and display attribute data at each point using the power of the built in ESRI ArcGIS® Engine†
- **Expanded Data Options** - Capture a full range of environmental variables affecting groundwater recharge including precipitation, evaporation, discharge, and manual measurements.
- **QA/QC and Statistics** - Identify data anomalies, understand spatial and temporal trends, and gain confidence in the data assessments.
- **Reporting Automation** - Quickly create customized reports that incorporate logo and company details, site photos, well completion and lithology profiles, monitoring data, sampling dates, and other information.
- **Data Flexibility** - Export location profiles to an image, import/export time-series to MS Excel™ and import from MS Access™, export maps to Google® Earth™ or as ESRI Shapefile† format.
