

Online Training

Learn. Apply. Become the Expert.

Make the most of your software investment.

Enroll in one of our Online Courses and save time and money.

ABOUT TRAINING SERVICES

For more than 15 years, Schlumberger Water Services (SWS) Training group has offered a range of educational courses for all levels of expertise, around the world. Our courses are designed to decrease the confusion typically associated with technical topics, and enhance the quality and reliability of your projects. Building on the success of our open enrollment and on-site courses, SWS is pleased to announce a new suite of online training courses.

ONLINE TRAINING

SWS recognizes that budgetary constraints or a tight schedule can limit you from attending an open enrollment course. That is why we have introduced a series of online courses using web-meeting and conference calling technology, giving you the flexibility to learn from your home or office. Learn from knowledgeable instructors skilled at communicating key points which will allow you to use your SWS software more effectively.

Our Courses Include:

- Knowledgeable instructors skilled at communicating ideas and concepts
- Opportunity to work at your own pace and have your personal questions answered
- A period of time reserved for receiving professional advice on personal projects
- A complete set of course notes and sample exercises
- CD containing lab exercise files, a trial version of the software and any supplementary material (if applicable).

BENEFITS

- Reduce logistical costs (travel, course enrollment, accommodations)
- Enjoy technology-enabled hands-on learning from the convenience of your home or office
- Interact with other training participants to share knowledge and experiences

COURSE DURATIONS

Our online courses are available in one or two day formats to meet your requirements:

One Day Course - will get you started on how to use and apply the software through a number of lab exercises that demonstrate real-world problems. The lectures provide an overview of the software including discussions of key features of the program.

Two Day Course - builds on the content of the One Day Course, and includes lectures and discussions on theory, and more hands-on lab exercises demonstrating advanced applications of the software.

COURSE TOPICS

APPLIED GROUNDWATER FLOW & CONTAMINANT TRANSPORT MODELING - Using Visual MODFLOW Premium

MAKING SENSE OF ENVIRONMENTAL DATA - Using Hydro GeoAnalyst

CONCEPTUAL MODEL DEVELOPMENT FOR FEFLOW OR VISUAL MODFLOW - Using Hydro GeoBuilder
