

Schlumberger Water Services Launches Diver-DCX

Extended communication capabilities using telemetry systems

Delft, Netherlands, July 16th, 2010 - Schlumberger Water Services (SWS) announced today the release of Diver-DCX* (Direct Communication eXchanger), a new component in the Diver-Suite* of groundwater monitoring systems that expands the communication format of Diver dataloggers to SDI-12 compatible telemetry systems. Diver-DCX provides new or existing customers with the ability to integrate Diver dataloggers into telemetry systems for effective real-time monitoring of municipal water supplies, industrial and contaminated sites, and water levels and quality at mine sites.

“Historically our customers were limited to retrieving datalogger data at the well site using cables or within close vicinity using short-range wireless systems”, said Martin Draeger, Marketing Manager SWS. “With the release of Diver-DCX, groundwater data can now be transmitted globally through our SDI-12 compatible telemetry system, giving groundwater suppliers instant access to detailed groundwater data with the click of a button. The result is significant cost and time savings over manual data collection.”

Diver-DCX features a built-in pressure sensor for automatically compensating water levels to the effects of atmospheric pressure, reducing the need for manual post-processing. The robust compact housing is water-resistant and is powered by an external source (no internal battery is required). This allows for flexible installation inside the well casing, translating to long-term, reliable operation. Diver-DCX is CE Certified and is compliant with the SDI-12 standard for environmental data acquisition.

About Schlumberger Water Services

Schlumberger is the world's leading supplier of technology, integrated project management and information solutions to customers working in the oil and gas industry worldwide. Employing approximately 83,000 people representing over 140 nationalities and working in approximately 80 countries, Schlumberger provides the industry's widest range of products and services from exploration through production.

Schlumberger Water Services operates globally and specializes in the development, management, and environmental protection of water resources. Leveraging experience and proprietary subsurface characterization technologies, Schlumberger Water Services offers mining, power, oil and gas, and public sector clients with the decision-making framework for addressing short- and long-term water challenges. For more information, visit www.water.slb.com.

Schlumberger Limited has principal offices in Paris, Houston and The Hague and reported revenues of \$22.70 billion in 2009.
